

Did you know, as many as 50 people can be helped by one tissue donor?

Donated tissues can dramatically improve the quality of life for others and even save lives. See the difference you could make at www.organdonation.nhs.uk

Corneas

help restore sight to people. Most people are able to donate their corneas after death.

Heart valves

can be transplanted to save the lives of children born with heart defects and adults with damaged heart valves.

Tendons and meniscus

can rebuild damaged joints, helping people move more easily.

Skin

can be used as a natural dressing to help treat people with serious burns.

Bone

donated bone can be used in bone grafts, restoring health and mobility to many patients.

Femoral arteries

replace damaged or infected arteries to improve quality of life.
